DETAILED ACTION

Drawings

1. Figure 1 should be designated by a legend such as --Prior Art-- because only that which is old is illustrated. See MPEP § 608.02(g). A proposed drawing correction or corrected drawings are required in reply to the Office action to avoid abandonment of the application. The objection to the drawings will not be held in abeyance.

Claim Rejections - 35 USC § 112

2. Claims 1-24 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claim 1, lines 5, "said base station" lacks antecedent basis. The same problem is found in claim 13.

Claim Rejections - 35 USC § 103

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any

evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

5. Claims 1, 2, 13 and 14 are rejected under 35 U.S.C. 103(a) as being unpatentable over Tanno et al. (US 6,078,572) in view of Wright et al. (US 6,240,083).

Tanno et al. discloses a CDMA mobile communication system in Fig. 1 comprising the following features of: base station 30 for broadcasting the state of common reverse channel 10 for mobile stations 1-4 to recognize the transmission permission signal when the transmission request signal is transmitted from the mobile stations through the common reverse channel 10; mobile stations 1-4 for transmitting the data in accordance with the transmission timing which are designated from the base station 30; the mobile station for generating the data transmitted to the base station 30, for transmitting the data, for converting the data into RF signal and transmitting to base station 30 through an RF antenna, for receiving broadcast signal from base station 30, and for controlling the transmission timing in accordance with the transmission permission signal. Tanno et al. does not disclose that the transmission request signal in the reverse channel is the code synchronization. Wright et al. discloses a multiple access communication system comprising the following features: in Fig. 13, the reverse channel Aloha transmission burst includes a 6 bit synchronization sequence. It would have been obvious to one of the ordinary skill in the art at the time of the invention to modify the system of Tanno et al., by using the features, as taught by Wright et al., in order to provide a rapid acquisition of a transmission from mobile stations. See column 18, lines 26-40.

Allowable Subject Matter

6. Claims 3-12 and 15-24 would be allowable if rewritten to overcome the rejection(s) under 35 U.S.C. 112, second paragraph, set forth in this Office action and to include all of the limitations of the base claim and any intervening claims.

Conclusion

7. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Gerakoulis (US 5,838,669) discloses a CDMA system.
